Family Night

In addition to daily instruction in reading, math, and ELPA domain-focused work on speaking and writing, we provided a memorable four-week experience for our migrant students that was rich in culture, language acquisition, and memories with friends!

THE GIANT SQUID

- live in the twilight zone.
- can be larger than a city bus.
- eat fish and smaller squids.

THE GIANT SQUID

the giant squid lives thousands of feet deep in the ocean. Squids use their long arms and tentacles mostly to eat. They stretch out their long tentacles to catch fish, crabs, shrimp, and other sea creatures. Squids also have sharp, parrot-like beaks.
